Abstract (en)

[origin: WO9107160A1] The storage bottle (10) contains a constituent of a medicinal solution (13) and a transfer device for transfering the solution, one it has been mixed with a solvent, into a final-use container. The bottle comprises a constricted neck (12) in which is located, during the storage phase, a sealing device (15) consisting of two elements: a first element (16a) consisting of an elastomeric stopper, and a second element (16b) consisting of an elastomeric O-ring seal. At least one inlet opens into the space between the first and second elements of the sealing device.
