Abstract (en)

1. Process for the manufacture of chlorosulfonic acid from hydrogen chloride and sulfur trioxide dissolved in chlorosulfonic acid, characterized by mixing the sulfur trioxide dissolved in chlorosulfonic acid and hydrogen chloride gas in a Venturi nozzle, allowing them to react and keeping the temperature at the end of the Venturi tube in the range of from 70 to 100 degrees C.

Abstract (de)

In einem Venturi-Rohr werden Chlorwasserstoff - Gas und Chlorsulfinsäure, die SO₃ gelöst enthält, innig vermischt. Dabei findet in sehr kurzer Zeit eine Reaktion unter. Bildung von weiterer Chlorsulfinsäure statt. Am Ende des Venturi-Rohres soll die Temperatur der Chlorsulfinsäure 70 - 100°C betragen.
