Abstract (en)

[origin: WO9629044A1] Device (1) for irrigating or washing the nasal cavities and the rhinopharynx which comprises a substantially bell-shaped nozzle (2) which is adapted to be sealingly pressed to the nasal vestibule of one of the nasal cavities of the user, who places his head slightly leaned forwards or sideways, and that comprises axially at least a hole for the outflow of the solution that communicates with an end of the conduction tube (5) which at the other end has means (6) for connection to a bag (7) or the like for supplying, advantageously by gravity, the solution to be sprinkled, the solution and the washing product flowing along a nasal cavity and through the rhinopharynx into the contralateral nasal cavity and flowing outside through the vestibule of the contralateral nasal cavity.
