Abstract (en)

[origin: WO9631850A1] A portable one-way radio pager (1) comprising receiving means (4, 5, 6) for receiving radio messages, a memory (8) for storing the messages, a screen (2), a simplified keypad (3) and an electronic CPU (7). The memory comprises a directory (8a) for storing at least the names and telephone numbers of other parties, and the CPU is designed to recognise specific messages known as download messages in order to store the contents of such messages in the directory and display data from the directory on the screen in response to a request from the user.
