Abstract (en)

[origin: EP0000270A1] A composition comprising a liquid polymerisable resin and an alloy of iron and silicon, known as ferrosilicon, for use as a metal repair or reclamation material. The invention also includes a two-component pack including the liquid polymerisable resin as one component and a catalyst or hardener therefor as the other component, ferrosilicon being present in one or both components. Also described is the use of the composition and of the pack in the repair of metal parts.
