Abstract (en)

[origin: US4117125A] Cephalosporins with the formula <CHEM> in which R represents various acyl substituents; n represents 2-4, preferably 2, n min represents 1-4, preferably 1, R min represents hydrogen or lower alkyl from one to four carbons, show antibacterial activity. They can be prepared by reacting the corresponding 3-acetoxy- methyl cephalosporin with the appropriate carboxyalkylamino-alkyltetrazolethione. The tetrazolethiones used as intermediates also form part of the invention.
