Abstract (en)
[origin: ES470861A1] The invention relates to new substituted 2-benzoyl-4-chloroglycinanilide derivatives, to a process for their production and to their use as medicaments. The new derivatives according to the invention correspond to the general formula < IMAGE > (I) in which: R may be a linear or branched alkyl group, preferably a lower alkyl group R1 and R2 may be the same or different and are selected from hydrogen, alkyl, alkenyl, alkynyl, hydroxy alkyl, alkoxy alkyl and aralkyl groups, these various groups optionally being linear or branched, and from 3- to 6-membered cycloalkyl groups optionally substituted on the alpha -carbon atom by an alkynyl radical in addition, the groups R1 and R2 may form with the nitrogen atom to which they are attached an optionally saturated 5-membered or 6-membered nitrogen heterocycle optionally containing a second heteroatom selected from oxygen and nitrogen, said heterocycle optionally being substituted, preferably on the second nitrogen atom, by a lower alkyl radical and their salts obtained with therapeutically acceptable mineral or organic acids.
