Abstract (en)

Concentrated liquid fabric softening composition containing a fabric substantive agent, selected from poly-ammonium and alkylpyridinium salts and mixtures thereof, in conjunction with a fabric softening component, selected from quaternary ammonium salts, alkylimidazolinium salts, fatty esters, fatty ethers, and fatty compounds containing a sulfur atom or nitrogen amide linking group and mixtures thereof, together with a liquid carrier. The weight of the fabric-substantive agent to the fabric-softening component is in the range from about 6:1 to about 1:4. The subject concentrate softener compositions are easily dispersible in aqueous medium and thus can evenly deposit onto fibers to thereby provide textile handling benefits inclusive of softening, static control, ease-of-ironing, fluffiness, pliability and smoothness.
