Abstract (en)

[origin: EP0805025A2] The conveyor device comprises a transport device (5) which has at least one endless conveyor with push members for the printing material. The transport device comprises a fixed section (7) and a movable section (8) and the endless conveyor extends over both sections. A first pivot axis (10) is located in the transition area between the two sections, around which the movable section is pivotably located. The axis runs at right-angles to the conveyor direction of the printing material and horizontally. For access to a first printing mechanism (1), the movable section is pivoted from its work position around the first pivot axis downwards into a release position.
