Abstract (en)
[origin: ES471403A1] This invention relates to a process for the preparation of compounds having the general formula: < IMAGE > (I) in which: R1 represents a hydrogen atom, an optionally substituted alkyl, aryl or aralkyl radical R2 and R3 are the same or different and represent independently a hydrogen atom, a lower alkyl, aryl or heterocyclic radical and R4 represents a hydrogen atom or an alkyl, cycloalkyl, alkoxy carbonyl, carboxy, aryl or heterocyclic radical, comprising reacting a compound having the formula: < IMAGE > (II) in which R1, R2 and R3 are as defined above, with a compound having the formula: < IMAGE > (III) in which R4 is as defined above X is a halogen atom, or an optionally substituted alkoxy, thioalkyl or amino group and Y represents an optionally substituted alkoxy, thioalkyl or amino group, or a group of the formula: < IMAGE > in which R is a lower alkyl or aryl radical or both the groups X and Y, together with the carbon atom to which they are attached, form a 6-membered hexahydro-S-triazinic, trioxannic or trithianic heterocyclic nucleus, in an inert solvent, at a temperature between 0 DEG and 150 DEG C. and in an anhydrous medium, and, if desired, liberating the free base.
