Abstract (en)

In a mill comprising a cylindrical drum (6) of horizontal axis provided with two end ports (8) for loading and discharge respectively, and mounted on intermediate support members in such a manner as to be able to rotate about itself under the control of a drive system, said support members consist of two opposing pairs of idle contact rollers (4) of hard material having their axes parallel to the drum axis, said drive system consisting of a belt transmission (9). <IMAGE>
