Abstract (en)

A portable send and receive set such as a cellular telephone comprises a main body (11) and a door member (12) hinged to the main body to be movable between a closed position and an open position. The apparatus comprises a pushbutton (19) with a first position of stand-by or released and a second position of stop in which it is fully pressed and a third position intermediate between the first and second positions. In the intermediate position the pushbutton commands generation of a control signal for the apparatus functions and in the stop position enables opening of the door. <IMAGE>
