Abstract (en)

The vacuum pack is filled with a granular material such as ground coffee. The pack comprises a bottom, upright sidewalls and a top wall which are made of a sheetlike flexible material. The vacuum pack is at least substantially cube-shaped. In particular, the vacuum pack is folded up at its top by way of two parts of the sheetlike material lying against each other, which are fixedly bonded to each other, so that the pack can be opened by pulling the two parts loose from each other. <IMAGE>
