Abstract (en)

[origin: DE19655023A1] The adapter housing has an accommodation part with a locating surface for the outside (14) of the current rail (5). Out of the locating surface extend at least two spike-type contact points at positions which coincide with the location of at least two conductors (13) in the current rail. To the accommodation part, at the top and the bottom, closure parts are linked, which fix in common the assembled current rail system in the light adapter. The accommodation part has a location surface for an arched exterior of the current rail (5) and for upper and lower extending end sections of the support profile.
