Abstract (en)
[origin: DE19730089A1] A transmission method in a telecommunication network having telecommunication channels for messages and an additional communication channel, through which controlling and monitoring information acting directly on devices is transmitted between two service units through two network elements. The communication channel is also used as a service channel for service information. Therefore, service units (10a; 10b) have means for addressing and receiving selective service information, and service information is routed within the telecommunication network by means of addresses thereof to service units (10a; 10b) having corresponding addresses.
