Abstract (en)

[origin: EP1026302A2] Apparatus for winding fiber felt insulation materials has a deflector with a belt guide (18). It passes over at least two rollers (15,16). The first roller (15) is fixed near the entry of the fiber web (1) into the winding station (8). The second roller (16) is at least at one arm (19) with a length extension, which swings round the center of the winding station (8). Apparatus for winding fiber felt insulation materials has a deflector with a belt guide (18) passes over at least two rollers (15,16). The second roller (16) is at least at one arm (19) with a length extension, which swings round the center of the winding station (8) so that the belt (18) has one level at the outer surface of the wound web (1) on an extension of the conveyor belt (2).
