Abstract (en)

[origin: FR2771436A1] The protective device is constituted by a cold water pipe (2) supplying edge jets (1) controlled by push buttons (3) placed under a corridor of slabs (5). These slabs move slightly by means of a flexible joint (6) parallel to the pool. The user (7), on stepping on the slab, inadvertently exerts a pressure on one of the slabs which presses the button and puts the jet into action. This jet startles toddlers and makes them run away from the pool edge.
