Abstract (en)

[origin: WO9931327A1] Disclosed is a regulating device for a moveable tool of a mobile machine, more particularly, for the shovel of a wheel loader or the like, comprising a lifting frame and a tilting rod, in addition to several end position stops for the tool and the rod. At least one stop (6, 7, 8) is wedge-shaped and is displaceably fixed in such a way that the stop (6, 7, 8) can be regulated. The invention seeks to provide a simple, reliable and easy system to regulate the stops. This is achieved in that the wedge-shaped, displaceable stop (6, 7, 8) can be displaced in and against the direction of the wedge and is formed by a wedge-shaped anvil (15) with a displaceable anvil support (17).
