Abstract (en)

[origin: EP0949012A1] Powders or granules are deposited on a film (10) or on a band (100) by means of several rollers (1,2,3,4) which are driven at a constant speed by a conveyor (5). There are several vacuum tables (20,21,22) which are given an alternate oscillatory movement of low amplitude. The support is tensioned in its movement direction.
