Abstract (en)

[origin: EP0947968A2] The transmitter (20) has a fixed code generator (12) that produces a fixed code (28) that is placed in a fixed code table (14). A switching device (16) passes either the fixed code or an alternate code (26) produced by an alternate code generator (10) to a transmitter. The fixed code generator evaluates a signal that can be influenced by the alternate code and only produces the fixed code if the signal is not affected by the alternate code.
