Abstract (en)  
[origin: EP0000734B1] 1. A process for the production of profiles from composite fibrous materials, wherein strands of fibrous materials continuously impregnated with liquid reaction resins are wrapped or braided immediately after impregnation or in the vicinity of a prehardening zone with drawn and/or preoriented and/or textured fibres or monofilaments and are hardened in a following hardening zone, characterised in that the fibres or monofilaments consist of polyamides, thermoplastic polyesters, polycarbonates, polyacrylonitrile, modacrylics, polyolefins, polyvinyl chloride, polytetrafluoroethylene, cellulose, regenerated cellulose, cellulose esters, polyvinyl alcohol or polyurethane.
