Abstract (en)

[origin: DE19704244A1] The invention relates to novel 5-hydroxyalkyl substituted phenyls, which are produced either by reacting corresponding benzaldehydes with Grignard compounds and then reduces the remaining functional groups, or by reducing corresponding benzoic acid esters according to the usual methods to the corresponding hydroxy compounds. The 5-hydroxyalkyl substituted phenyls are suitable as active substances in medicaments, especially for the treatment of dyslipidaemia.
