Abstract (en)  
[origin: US4217017A] An angle adapter for an electrical component, particularly for a relay, is disclosed. It consists of a base member comprising a carrier plate for the component as well as a terminal or connection strip for accommodating contact pins. Both parts consist of synthetic material and at least the connection trip is constructed in the form of a flexible conductor path whereby connecting elements between the terminals of the components and the contact pins of the adapter are constructed in the form of conductor paths.
