Abstract (en)

[origin: WO9837215A1] The invention relates to the design, construction and use of eukaryotic cell lines useful in the identification of inhibitors of beta -amyloid processing. More specifically, the invention relates to in vitro assays capable of identifying or quantifying a 4.2 kDa beta -amyloid protein. The present invention also provides for DNA and protein molecules for the design, construction and use of eukaryotic cell lines useful in the identification of inhibitors of beta -amyloid processing.
