Abstract (en)

[origin: EP0699458A2] Components (21/22/23a/23b/25/32) of a ski are assembled in a cavities (29c/29d) of a mold (29) together with an elongated piece (31) of foamable gum substance, and the mold (29) is heated so as to internally produce foam pressing the components (25/32) to the internal surface of the other components (21/22/23a/23b) providing the outer configuration of the ski, thereby economically fabricating the ski without a void.
