Abstract (en)

[origin: WO2007033687A1] Apparatus for shaving a person's hair by means of laser radiation (4), comprising a base unit (1) having at least one laser light source, a portable unit (2) which a user can move to the region of the hair to be cut, and also transmission means having a plurality of optical fibres (7) which can transmit the laser radiation emitted by the at least one laser light source from the base unit (1) to the portable unit (2), with the ends of the optical fibres (7) being arranged in the portable unit (2) in such a way that the laser radiation (4) emitted from these ends can at least partially overlap and has a linear beam cross section in the overlapped state.
