Abstract (en)

[origin: FR2752323A1] The invention concerns a method and a device for recording in cyclic loops several sound sequences, for their simultaneous reproduction, by means of a device using sampled sound signals and comprising a memory (103), a unit (101) for controlling the memory (103) and means for reproducing sounds. The method consists the following steps: triggering loops with default values, so that they function substantially permanently with the desired values in terms of a tempo common to all the loops, of the number of desired measures in each of said loops and of the sample frequency; recording the sound signals for at least one predetermined loop.
