Abstract (en)

A method for the continuous modulation of the speed of textile covering and twisting machines, including at least one actuating motor (16, 15, 36-39) controlling at least one line of spindles (18, 19) feeding the collecting of the yarn, where provision is made for a variable-speed control system (14, 13, 35) of at least one motor (16, 15, 36-39) of the machine, capable of being regulated by a panel (11) actuated by an operator, where the panel (11) in the control system (14, 13, 35) can be set up to achieve a continuous speed variation of the machine during the entire processing cycle, depending on pre-selected parameters. <IMAGE>
