Abstract (en)

The invention relates to a mobile hearing treatment equipment which comprises a central processing unit, a first interface unit, an audio decoder, a digital/analog converter, an amplifier and a loudspeaker. The mobile hearing treatment equipment is connected with a hearing test equipment and can download audio files for treatment. An intelligent chip is adopted so as to make the hearing treatment equipment compact and easy to carry. The intelligent chip can intelligently control the sound output so that user can easily operate the equipment. The audio file for treatment can be updated from the hearing test equipment through the first interface unit whenever necessary.
