Abstract (en)

[origin: DE19719666A1] The invention relates to a device for storing bottles, specially wine bottles, in a substantially horizontal position, comprising one base element (10) that is configured by two frame elements (12) with corresponding polygonal shapes and wall elements (16) extending between two corresponding frame limbs (14) of the two frame elements (12), which connects both frame elements (12). The two frame elements (12) are allocated connecting elements for optional detachable connection of the base element to an adjacent base element.
