Abstract (en)

A method of decorating a length of coving (10) comprises securing to the exposed surface (16) of the coving a spaced array of decorative three-dimensional embellishers (17). Each embellisher has a three-dimensional outer decorative surface and a curved inner surface. The curved inner surface includes a continuous outer peripheral portion (20) which is shaped to fit against the curved surface of the coving to provide an uninterrupted visible peripheral junction (21) between the embellisher and the surface of the coving. Each embellisher is hollow and has a mounting surface (19) within its outer peripheral surface (20) for the application of adhesive (22) to secure the embellisher to the coving. <IMAGE>
