Abstract (en)

[origin: DE19730143C1] The hinge (2) for the door or window has one section fitted into the fixed frame and one shaft section (1) located into a bore in the end face of the window/door. A separate adjuster (3) is fitted into a second bore and has a number of spines at the inner end to grip into one or more grooves in the end of the hinge shaft. The spines are angled so that when the adjuster is rotated in either direction the shaft is moved in the bore in either direction. The two bores, for the hinge shaft and the adjuster, are angled to meet inside the fitting. The setting of the hinge is adjusted without removing the door/window.
