Abstract (en)

[origin: DE19731360A1] The invention enables different assembly positions of a locating device for ground vehicles with a support (M) arranged in said vehicle to accommodate the sensors (Sx) to detect the movement components of the ground vehicle so as to determine its position. For improved locating reliability of the sensors (Sx), at least one sensor (Sx) is displaceably arranged in the support (M) and the measuring position of the sensor (Sx) can be readjusted.
