Abstract (en)

[origin: FR2765253A1] The invention concerns a device for picking up an object from the ground comprising: an assembly of rigid walls forming a box (2) with an opening for receiving the waste; a piece (4) for closing at least partially said opening. The invention is characterised in that: the opening (3) extends in a substantially vertical plane at the front of the box (2); the closing piece (4) is borne by one of the ends (7, 8) of at least one thin element (9) guided in translation onto the box along a substantially perpendicular direction to the box opening plane.
