Abstract (en)

[origin: DE19734414A1] The invention relates to a relativety soft, mainly tabular but three-dimensional product, obtained by means of an embossing die intended for processing a relatively soft and tabular end product consisting of a plurality of "hinged parallelograms", which are limited by lines of constricted material in such a way that tractive forces exerted thereupon cause the hinged parallelogram formation to behave like a pantograph, whereby on the primary volume increase resulting from the embossing process a secondary volume increase is overlaid by stretching.
