Abstract (en)

[origin: DE19743691C1] The arrangement locks and unlocks the cover (8) of a money tray (2) of a cash register, which is arranged and fixed on a stationary base part (24). The arrangement includes a bolt (36) arranged at a money tray casing (4), which is movable between an unlocking position and a locking position. A solenoid has a drive lever. A locking element (32), movable between an effective position and an ineffective position, is activated by a lock (18) to move the bolt. A key channel of the lock is concealed when the money tray is placed on the base part. The lock is preferably installed in a wall (12) of the money tray casing, which is covered by the base part or another object located directly at the installation place of the money tray casing.
