Abstract (en)

[origin: DE19751960C1] The invention relates to a device for removing eyelets, especially special steel eyelets, on strips of plastic or fabric. Eyelets on strips of plastic or fabric, e.g. in lorry tarpaulins, become worn with use and generally have a service life that is considerably shorter than the strips of plastic or fabric. As a result it is both usual and economically feasible to replace the worn eyelets with new eyelets in order to take full advantage of the service life of the fabric or plastic strip. Eyelets are generally removed by hand. This is a long, drawn-out process and is not economically worthwhile. The invention provides a device for removing eyelets, especially special steel eyelets, on strips of plastic or fabric, comprising means for compressing the edge of the eyelet towards its centre point or in an opposite direction.
