Abstract (en)
[origin: US4198035A] In a blowing lance media-supply arrangement for a metallurgical vessel, a carrying car is displaceable into and out of a blowing position along a moving path and includes at least one blowing lance. Media supply conduits lead to the blowing position of the carrying car and are connected to a stationary joining piece arranged there. A joining counter piece corresponding to the joining piece is mounted to the carrying car, and the joining piece and the joining counter piece are connectable in a conduit-like manner.
