Abstract (en)

[origin: DE19921962A1] An agent for oxidative hair dyeing obtained by mixing: (A) a component containing a developer-coupler combination; a surfactant combination; an amino acid or salt; and an alcohol-containing liquid carrier of viscosity below 100 mPa.s with (B) a component comprising an oxidant; a 10-24C fatty alcohol; a polypropylene- and/or polyethylene-glycol ether; and an emulsion-forming composition containing an acrylate/steareth-20 (or ceteth-20) itaconate copolymer. An agent for oxidative hair dyeing is obtained by mixing: (A) a component comprising: (a) a developer-coupler combination; (b) a nonionic/anionic surfactant combination; (c) an amino acid or salt; and (d) a mono- or di-hydric alcohol-containing liquid carrier of viscosity below 100 mPa.s with (B) a component comprising: (a) an oxidant; (b) 2-15 wt.% 10-24C natural or synthetic fatty alcohol; (c) a polypropylene- and/or polyethylene-glycol ether; and (d) an emulsion-forming composition containing an acrylic acid polymer which is an acrylate/steareth-20 (or ceteth-20) itaconate copolymer.
