Abstract (en)

[origin: FR2777650A1] The interchangeable working part of the watch and its container (1) is enclosed within a protective case (7) which reveals only the indicating dial and the winding mechanism (4). The joint between the crown and the spindle sleeve is made watertight by jointing rings (8,9). A nut (6) is added to ensure firm location to the protective case when locked. The nut enables visual indication (10) of correct locking.
