Abstract (en)

[origin: US2001015543A1] An interface element (10) used on a gliding board, said element being inserted between the sole (20) of the user's boot and the top side of the board (8) so as to take the thrust exerted toward the board by the user at least at the front end of the sole, and which comprises at least one zone (11, 12, 15) made of a thermoformable material capable, after exposure to heat, of matching the imprint of at least the front end (21) of the sole (20) of the boot so as to fill the volume between the top side (8) of the board and the sole of the boot (20).
