Abstract (en)

[origin: DE19855361A1] Disclosed is a plastic receptacle having a lid (1). The receptacle comprises an upper edge and the lid (1) comprises an area (2) encompassing said upper edge. Said area (2) comprises a side (3) which radially faces inwards. The lid also comprises a middle area (4) surrounded by said first area (2) and an outer area (5) extending downwards. Furthermore, the lid (1) is provided with box-type projections (6) on its side (3) which radially faces inwards. The aim of the invention is to achieve better centring and better stability of the stacked-up receptacles having lids (1) by maintaining a low stack height of the lids (1). To this end, the side (3) of the lid (1) which faces radially inwards has a surrounding terracing (7) which has approximately the same width as the box-type projections (6) and said box-type projections (6) are arranged on the terracing (7) and extend to the upper edge of the encompassing area (2) of the lid (1).
