Abstract (en)
[origin: FR2790697A1] The invention concerns a work station with modular elements particularly simple to be handled and allowing the station to be transformed along with the product to be assembled. The work station (1) comprises a frame (3) consisting of a set of plates (5) and multidirectional joining components (6) mutually assembled to constitute compartments (10). In said compartments are placed several elements (4) serving as working and/or storage and/or transfer zones. The elements (4) are maintained on the frame (3) with removable pins (13) or screws enabling fast mounting and dismounting. The elements (4) are designed to be interchangeable and are modules adaptable according to the components manipulated, the appliances and accessories used, the product to be manufactured and the operator's morphology.
