Abstract (en)
[origin: WO0145849A1] The invention relates to a mill classifier, in particular a roller mill classifier comprising a strip rotor (16) and a concentrically arranged guide flap ring (4) provided with flow optimized guide flaps (5) and flow channels in order to provide parallel upstream and downstream flow without the need for constriction or widening, having the effect of a diffusor. Said flow-optimized guide flaps (5), comprising a flow pipe (10) having a vertical rotational axis and at least one baffle plate, can be adjustably arranged in order to enable a tangential to radial flow of guide rotor (16).
