Abstract (en)

[origin: EP0856386A1] The hair cutter (1) has upper and lower cutters (2,3) arranged one on top of the other. The upper cutter is vibrated for cutting and both cutters can be adjusted with respect to each other by an adjuster (4) to alter the length of the cut. The upper and lower cutters and the adjuster are made as a single unit (5) which can be detached from the machine. The unit can be joined to the machine by a latching, locking or screw connection.
