Abstract (en)

[origin: WO03053844A1] The invention relates to a method for producing a component with a mobile structure (30), whereby a substrate is processed to obtain intermediate components (20) on said substrate, an intermediate component (20) presenting said mobile structure (30) and a protective structure (50, 54), which protects the mobile structure (30). The substrate is separated to obtain an isolated intermediate component (20), which presents said protective structure (50, 54). Said protective structure (50, 54) is then removed from the isolated intermediate component (20) to obtain the present component. Said invention also relates to a device for producing a component, which comprises units for executing the steps of said method.
