Abstract (en)

[origin: WO2006056940A1] Compression artifacts are known to be especially annoying on high end TV's, e.g. because the sharpness enhancement settings increase the visibility of block boundaries. A system arranged for receiving a video data stream for displaying an image, the system comprising an enhancer for enhancement of the displayed image, wherein the system comprises an extractor to extract compression parameters from the video data stream, and comprises an adjustor to adjust, in dependence on the extracted compression parameters, settings of the enhancer.
