Abstract (en)

[origin: EP0889550A2] A terminal cover with a tubular housing into which is inserted a box terminal for connecting an electric conductor and which is provided at its front face with a protective cover, which serves as shock-hazard protection relative to the conductors, and where several terminal connections for connection of the electrical conductors are provided with different spacings from the top of the housing. The protective cover is displaceable for matching the terminal connections used to the connection point. The protective cover is specifically latchable relative to the terminal cover at different positions.
