Abstract (en)  
[origin: EP0001923A1] A drilling bit has cutting edges radiating from its axis, each being a segmental part of a circular cutter (19, 20, 21) the axis of which is substantially tangential to a circle centred on the bit axis, the cutters (19, 20, 21) being at different distances from the bit axis. The cutters (19, 20, 21) may be rotated to enable worn cutting edges to be replaced and the extremities of all cutting edges are substantially in a plane normal to the bit axis.
