Abstract (en)

[origin: WO2007093065A1] A modular wall-construction system encompasses a frame (10) which has a front side (12) and a reverse side (13) and which can be secured with the reverse side in contact with the flat surface of the wall, and a decorative element (11), which can be releasably connected to the frame (10) in such a way that the decorative element (11) is in contact with the front side (12) of the frame (10) and completely covers the frame (10). In this system, the design of the decorative element in the form of a frameless, decorative sheet (11) gives an exceptionally varied range of possibilities for design and use, low-cost production and ease of mounting and capability for change.
